DETAILED ACTION

Allowable Subject Matter

1. Claims 2-3, 5-15, 18-23, 26-30 are allowed.

The following is an examiner's statement of reasons for allowance: The allowability of the claims resides, at least in part, that the closest prior art of record Green et al. (US 2005/0252605) does not disclose or suggest, alone or in combination the step of:

As for independent claim 5, **a control system coupled with the conveyors and the tester and comprising a machine- readable medium embodying information indicative of instructions that when performed by the control system results in operations comprising moving the first substrate with respect to the tester, identifying good RFID modules using the tester, aligning the good RFID modules with the RFID antennas, and forming RFID tags from the good RFID modules and the RFID antennas, in combination with the other elements and features of the claimed invention.**

As for independent claim 15, **selecting RFID module to RFID antenna assignments based on a pattern of bad RFID modules identified in the information; aligning the identified RFID modules with RFID antennas on a second reel-form substrate; and forming RFID tags on the second reel-form substrate from the identified RFID modules of the first reel-form substrate and the RFID antennas; wherein aligning and forming comprises aligning and forming the**

RFID tags in parallel, in combination with the other elements and features of the claimed invention.

As for independent claim 19, **forming RFID tags on the second reel-form substrate from the identified RFID modules of the first reel-form substrate and the RFID antennas; wherein aligning and forming comprises aligning and forming the RFID tags in parallel; wherein aligning and forming the RFID tags in parallel comprises differentially aligning and forming the RFID tags in response to identified bad modules**, in combination with the other elements and features of the claimed invention.

As for independent claim 23, **selecting RFID module to RFID antenna assignments based on a pattern of bad RFID modules identified in the information; aligning the identified RFID modules with RFID antennas on a second reel-form substrate; and forming RFID tags on the second reel-form substrate from the identified RFID modules of the first reel-form substrate and the RFID antennas; wherein aligning and forming comprises aligning and forming the RFID tags in parallel**, in combination with the other elements and features of the claimed invention.

As for independent claim 27, **forming RFID tags on the second reel-form substrate from the identified RFID modules of the first reel-form substrate and the RFID antennas; wherein aligning and forming comprises aligning and forming the RFID tags in parallel; wherein aligning and forming the RFID tags in parallel comprises differentially aligning and forming the RFID tags in response to**
